# Drive more engagement with outbound messaging

The Sunshine Conversations Notification API lets you send business-initiated messages on WhatsApp and SMS so you can deliver better customer experiences at scale. With a streamlined API that keeps technical load to a minimum, reaching one or many customers with personalized messages has never been easier.

Get ahead of your customers

- Flight changes & check-in notifications

- Fraud alerts for credit cards and checking accounts

- Product shipment and delivery confirmation

- Account deposits and transaction details

- IoT driven alerts from connected devices

- Marketing outreach campaigns

Build brand loyalty

Increase CSAT by anticipating customer needs. Keep users engaged with personalized messaging touch points across the customer journey.

Bring customers back

Keep the conversation alive with customers who have disengaged. Prevent churn with proactive messages on your customer's preferred channel.

Prevent escalations

Don't leave customers in the dark. Keep users updated about service issues before they happen and keep escalations through traditional support channels at bay.

The complete proactive messaging package

Full contextual support

Turn outbound messages into conversations. Get the full context on reply including full history and user profile

Rich message templates

Engage customers on SMS and WhatsApp with structured message templates and support for all message types, including multimedia

Delivery progress tracking

Follow the progress of your outbound messages with channel and user device delivery indicators

Streamlined message delivery

Reduce your technical load by sending one or many outbound messages in a single API call

A messaging platform that developers love

APIs for every messaging need

Leverage APIs designed to help your business send or receive messages on social and native channels

Easy to implement

Unlock access to developer-centric documentation, guides and videos. Get the rapid support you need to be up and running in no time

Designed to scale

Robust uptime SLAs, active 24x7 monitoring and a redundant messaging infrastructure built for resiliency and high-availability

Best-in-class security

Hosted and actively monitored on AWS, Sunshine Conversations maintains SSAE-16 SOC 1, 2 & 3, ISO 27001 and Privacy Shield certifications
